Category: Ice Dance

Subject: Choreographic Spinning Movement

Questions (clarifications)	Answers	Comments
How should the Technical Panel consider a movement which can be described as “walk around threes”?	Anything which can be identified and described as “walk around threes”, even if more than two rotations are performed, will not be considered as a Choreographic Spinning Movement.	The Judges will consider this type of movement when evaluating the Transitions and Composition Components.

Category: Ice Dance

Subject: Choreographic Character Step Sequence

Questions (clarifications)	Answers	Comments
Will the Technical Panel “confirm” a Choreographic Character Step Sequence if it is not performed from barrier to barrier along the Short Axis?	Yes. The Choreographic Character Step Sequence is “confirmed” when the Technical Panel can identify that it is performed along the Short Axis and within the permitted ice surface space AND moves from one side of the Long Axis to the other side of the Long Axis, even if it does not go from barrier to barrier.	The Judges will consider this as a pattern error and a negative feature when determining the GOE for a Choreographic Character Step Sequence.
