

# Technical Notification 306

Dated: March 28, 2024

Updated: May 9, 2024 (table in section 4)

Re: Singles – Choreographic and Partial Choreographic Sequence (ChSq and pChSq)

- (1) Calling procedure for pChSq DO readback
  - DO reads pChSq1 as "Partial Choreo Confirmed" or "P Choreo Confirmed"
  - DO reads pChSq as "Partial Choreo No Value" or "P Choreo No Value"
- (2) Listed jumps and spins of three revolutions or more are not allowed in the pChSq. The pChSq ends the moment a listed jump or spin of three revolutions or more is executed. These elements will be called and will occupy a box.
- (3) No identifiable sequence, or the wrong type of sequence is performed:

When pChSq/ChSq is required:

- Technical panel will only evaluate whether a pChSq/ChSq is confirmed or not.
- Technical panel will call a pChSq/ChSq No Value if there are not two different movements performed.
- Any other sequence performed will be considered connecting steps, will be ignored by the technical panel, and will NOT be called.

When StSq is required, but pChSq/ChSq is performed:

- Technical panel will call the appropriate level of a StSq (no value if the ice is not fully covered; StSqB if the ice is fully covered and no StSq level features are achieved).

- (4) Types of movements that may be included and identified in the pChSq/ChSq:

**Examples of Skating Movements** (*bolded movements are listed in TP Handbook for ChSq*)

<b>Spread Eagles</b>	Butterflies
<b>Ina Bauers</b>	Mazurkas
<b>Hydroblading</b>	Inside axel takeoffs
<b>Spirals</b>	Eulers
<b>Arabesques</b>	Falling leaves
Lunges	Walleys
Pivots	Split jumps
Illusions	Ballet jumps

**\*\* this list is not inclusive of all skating movements \*\***  
other movements may be designed, included or created for the pChSq/ChSq
